

ARVIN ARYANPOUR

Toronto, ON · 647-919-1103 · arvinaryanpoura@gmail.com · thearvina.com · linkedin.com/in/arvinary · github.com/TheArvinA

HIGHLIGHTS OF QUALIFICATIONS AND SKILLS

- Graduating software engineering student with hands-on experience building full-stack web applications, AI/CV systems, and microservices platforms; adept at delivering production-quality solutions in Python, FastAPI, React, and PostgreSQL.
 - Proficient in Python, JavaScript, Java, C/C++, C#, SQL; experienced with React, FastAPI, REST APIs, PostgreSQL, Git, and Linux/Unix environments; hands-on with PyTorch, YOLOv8, scikit-learn, and Unity ML-Agents across AI and ML projects.
 - Built end-to-end AI inference pipelines, full-stack analytics platforms, and scalable microservices — with demonstrated results: 15% API performance gain, 65% → 80% test coverage improvement, and 200ms load time reduction in production.
 - Experienced in Agile/Scrum workflows, code reviews, automated testing, and iterative software delivery; strong understanding of software engineering best practices and clean, maintainable code.
 - Proven communicator and collaborative team leader, developed through 10+ years competing and coaching in competitive soccer and 5+ years in volleyball; brings the same adaptability, accountability, and team-first mindset to engineering teams and cross-functional collaboration.
 - Fast, self-directed learner who consistently picks up new technologies and applies them to real problems; independently integrated PyTorch, YOLOv8, and Unity ML-Agents into personal and academic projects without formal coursework.
-

EXPERIENCE

Web Developer

Dec 2024 – Jan 2026

Pro Insulation Contracting

Toronto, ON

- Built lead-generation web applications in FastAPI with REST APIs, improving conversion rates and user engagement.
- Optimized performance and SEO, reducing page load times and increasing inbound traffic.
- Integrated analytics pipelines to track user behaviour and marketing-performance metrics, enabling data-driven product and campaign decisions.
- Collaborated directly with stakeholders to translate business requirements into scalable full-stack solutions, ensuring timely delivery of production-ready features.

Software Engineer Intern

Apr 2023 – Oct 2023

VerticalScope

Toronto, ON

- Developed 5+ reusable React UI components deployed across 1,200+ high-traffic community websites, improving frontend consistency and reducing per-site development overhead.
- Achieved a 200ms reduction in homepage load times, boosting user retention and ad impression metrics across the platform.
- Optimized backend API response times by 15% through strategic database indexing and query refactoring, reducing server-side latency for all active users.
- Increased codebase test coverage from 65% to 80% by authoring unit and integration tests, preventing critical regressions across the production environment.

Footwear Sales Associate

Sep 2024 – Present

Sporting Life

Toronto, ON

- Consistently earned the #1 sales ranking in my department by developing targeted product recommendations based on individual customer needs and purchasing patterns, converting consultative interactions into high-value purchases.
 - Exceeded Google review targets by up to 500% through consistently exceptional customer service and follow-through.
 - Adapted sales strategies in a high-volume retail environment based on direct customer feedback, consistently translating technical product knowledge into confident purchase decisions and exceeding weekly KPIs.
-

PROJECTS

- **Real-Time Volleyball Analytics Platform:** A full-stack web application that analyzes match footage to track player and ball movement in real time; achieved 87.9% detection precision for multi-object tracking by building a YOLOv8 + ByteTrack computer vision pipeline, with a FastAPI + React interface for live inference, frame-level analytics, and interactive match review.
- **Smart Parking Microservices System:** A backend platform managing real-time space allocation and dynamic pricing for smart parking lots; engineered as a microservices architecture with authenticated REST APIs across independent services, PostgreSQL persistence, and clean inter-service contracts designed for horizontal scalability.

- **Reinforcement Learning Agent – Capstone (Unity ML-Agents):** A 3D video game in which the player's AI companion NPC uses reinforcement learning to navigate the environment and support the player in real time; designed and trained a PPO agent with custom reward shaping, observation-space design, and full training-loop instrumentation to validate convergence.
-

EDUCATION

B.Eng., Computer Software Engineering

Toronto Metropolitan University

2021 – 2026

Toronto, ON

EXTRACURRICULARS

MUES Engineering Council – Event Coordinator

Planned and coordinated faculty-wide engineering events as part of the Metropolitan University Engineering Society.

TMU Formula Racing Team – Software Team

Contributed to embedded software and data systems on TMU's student-built formula race car across two competitive seasons.

Competitive Athletics – Soccer (10+ years) and Volleyball (5+ years)

Competed and coached in soccer and volleyball at a competitive level, developing leadership, communication, and resilience across high-pressure team environments.
