HIGHLIGHTS OF QUALIFICATIONS

- Graduating software engineering student with hands-on full-stack, computer vision, and machine learning experience across backend systems (FastAPI, REST APIs, PostgreSQL), frontend (React, HTML/CSS), and production-quality personal and contract projects.
- Proficient in Python, C/C++, Java, JavaScript, C#, SQL, VHDL, and MATLAB; experienced with PyTorch, YOLOv8, OpenCV, ByteTrack, scikit-learn, and Unity Machine Learning Agents (ML-Agents).
- Familiar with microservices architecture, scalable system design, WebSockets, and Agile/Scrum workflows including sprint planning, iterative delivery, and cross-functional collaboration.
- Highly personable communicator who naturally builds rapport with diverse stakeholders and consistently translates complex technical concepts into clear, accessible language for both technical and non-technical audiences.
- Collaborative team player with a demonstrated ability to contribute across multidisciplinary teams in professional, academic, and competitive engineering environments; brings enthusiasm, reliability, and a constructive attitude.
- Adaptable and fast learner who consistently picks up new technologies, frameworks, and domains quickly and applies them to real problems; comfortable with ambiguity and skilled at finding structure within it.
- Strong critical thinker with a pattern-recognition mindset; identifies root causes, anticipates edge cases, and iterates toward clean, maintainable solutions with a high attention to detail.
- Familiar with Git version control, Linux/UNIX environments, Field-Programmable Gate Array (FPGA) development (Quartus), Arduino, and Unity.

EXPERIENCE

Web Developer

Pro Insulation Contracting

Dec 2024 - Jan 2026 . Toronto, ON

- Built lead-generation web applications in FastAPI with REST APIs, improving conversion rates and user engagement.
- Optimized performance and Search Engine Optimization (SEO), reducing load times and increasing inbound traffic.
- Integrated analytics pipelines to track user behaviour and marketing-performance metrics.
- Translated business requirements into scalable technical solutions across frontend and backend systems.

Software Engineer Intern

VerticalScope

Apr 2023 - Oct 2023 . Toronto, ON

- 5+ reusable User Interface (UI) components developed across 1,200+ enthusiast websites, improving frontend consistency.
- 200ms reduction in homepage load times, contributing to a measurable increase in user retention and ad impressions.
- 15% optimization in backend Application Programming Interface (API) response times through strategic database indexing and query refactoring.
- 65% to 80% increase in codebase test coverage, preventing critical regressions in the production environment.

Footwear Sales Associate

Sporting Life

Sep 2024 - Present . Toronto, ON

- Consistently ranked #1 in department sales by identifying customer purchasing trends and anticipating needs beyond what was initially stated, delivering targeted recommendations that drove measurable results.
- Exceeded Google review targets by up to 500%, generating 12 verified reviews against a monthly goal of 2 through consistently exceptional customer interactions.
- Translate complex product specifications into clear, user-focused recommendations that consistently exceed Key Performance Indicators (KPIs).
- Adapt strategies in real time based on feedback, demonstrating iterative problem-solving in high-volume environments.

PROJECTS

- **Real-Time Volleyball Analytics Platform:** Built a YOLOv8 + ByteTrack computer vision pipeline achieving 87.9% precision for player and ball tracking; engineered the full FastAPI + React video stack for real-time inference, frame-level analytics, and an interactive review User Interface (UI).

- . **Smart Parking Microservices System:** Engineered a microservices-based platform with dynamic pricing logic and authenticated REST APIs across independent services; designed for horizontal scalability with PostgreSQL persistence and clean inter-service contracts.
- . **Reinforcement Learning Agent (Unity ML-Agents):** Designed and trained a Proximal Policy Optimization (PPO) agent in Unity ML-Agents, including custom reward shaping, observation-space design, and full training-loop instrumentation to validate convergence behaviour.

EDUCATION

B.Eng., Computer Software Engineering

Toronto Metropolitan University

2021 - 2026 . Toronto, ON

EXTRACURRICULARS

MUES Engineering Council - Event Coordinator

Planned and coordinated faculty-wide engineering events as part of the Metropolitan University Engineering Society, fostering community engagement and professional development across programs.

TMU Formula Racing Team - Software Team

Contributed to embedded software and data systems on TMU's student-built formula race car, collaborating with a multidisciplinary team across two competitive seasons.

Competitive Athletics - Soccer and Volleyball

Competed in soccer and volleyball at a competitive level throughout high school and university, developing strong teamwork, communication, and resilience through sustained team sport environments.
